Learning the business from the ground up, Shawn's career in pavement preservation started as just a "summer job." Like many before him, college summers evolved into full seasons and Shawn's pavement preservation career was launched. Adept at project management, combined with technical prowess in both product development and application, Shawn's influence on Vance Brother's programs quickly expanded into a full-blown senior leadership role. Recognizing Shawn's abilities and contributions, Vance entrusted the largest Chip Seal Division to Shawn. He built that business base as well as performing in an advisory role for potential expansions and market evaluations. Shawn recently was promoted to the role of Vice President of Contracting which oversees all application of chip seal, micro and slurry seal as well as our specialty applications based in the corporate headquarters.
