**Brett Gaither** has spent 14 years working with Engineers, Architects, Departments of Transportation, Commercial Property Owners, Schools, and Private Customers, showing them how to manage their pavement and implement cost-saving asphalt pavement management, recycling, and preservation programs. He has helped customers save 30% to 40% of their annual asphalt budget by implementing a solid pavement management plan, which uses eco efficient in place asphalt recycling (cold in place, pulverization, full-depth reclamation) and pavement preservation techniques (i.e., crack sealing, chip seals, slurry & micro surfacing, and thin asphalt overlays etc.) to extend the life of their existing asphalt.

Brett is a recognized leader in the pavement preservation industry, presenting at industry events, asphalt associations, Departments of Transportation, Public Work Associations, and university sponsored events.

Brett is an active member of: Boma, IFMA and MSPMA

Brett is a 1990 graduate of the University of Missouri - Columbia.
